Power System Transient Analysis: Theory and Practice using Simulation Programs (ATP-EMTP) By Eiichi Haginomori, Tadashi Koshiduka, Junichi Arai, Hisatochi Ikeda

Understanding transient phenomena in electric power systems and the harmful impact of resulting disturbances is an important aspect of power system operation and resilience. Bridging the gap from theory to practice, this guide introduces the fundamentals of transient phenomena affecting electric power systems using the numerical analysis tools, Alternative Transients Program- Electromagnetic Transients Program (ATP-EMTP) and ATP-DRAW. This technology is widely-applied to recognize and solve transient problems in power networks and components giving readers a highly practical and relevant perspective and the skills to analyse new transient phenomena encountered in the field.

Key features:

- Introduces novice engineers to transient phenomena using commonplace tools and models as well as background theory to link theory to practice.
- Develops analysis skills using the ATP-EMTP program, which is widely used in the electric power industry.
- Comprehensive coverage of recent developments such as HVDC power electronics with several case studies and their practical results.
- Provides extensive practical examples with over 150 data files for analysing transient phenomena and real life practical examples via a companion website.

Written by experts with deep experience in research, teaching and industry, this text defines transient phenomena in an electric power system and introduces a professional transient analysis tool with real examples to novice engineers in the electric power system industry. It also offers instruction for graduates studying all aspects of power systems.

About the Author

Eiichi Haginomori, University of Tokyo, Japan

Eiichi Haginomori is currently at the University of Tokyo. Previous to this he was in the Department of Electrical Engineering at Kyushu Institute of Technology (1998-2003) and in Chemical Engineering at Chuo University. At both universities he researched into EMTP application to Electrical Engineering. He was Chief Specialist in the Switchgear Engineering Department of Toshiba's Head Office for ten years, and belongs to IEC standard committee groups such as WG1 and WG10, in IEC SC17A (High-voltage Switchgear and controlgear).

Tadashi Koshiduka, Toshiba Co., Japan

Tadashi Koshiduka is currently a Senior Scientist at the High Power Technology Group in the Power & Industrial Systems Research & Development Center at Toshiba, Japan. Prior to this he worked as an engineer with the group (1998-2000), then a specialist (2000-2010). He is a technical paper reviewer in the Power and Energy Society of IEE Japan and current member and secretary of IEEDJ (The Institute of Engineers on Electrical Discharges in Japan). Mr Koshiduka holds three Japanese Patents, has contributed to 17 papers and co-authored one book.

Junichi Arai, Kougakuin University, Japan

Professor Arai is Chair of the Department of Electrical Engineering and Dean of the Faculty of Engineering at Kogakuin University. Previous to this he was Senior Fellow of the Transmission & Distribution System Division at Toshiba Corp., and Deputy Senior Chief Engineer in the International Marketing Division of TM T&D Corp. He has written seventeen papers related to the topic, a chapter in Electrical Engineering Handbook, published by IEE of Japan, and a chapter in Liberalization of Electricity Markets and Technological Issues. He holds 10 patents related to his research in power control and circuits.

Hisatoshi Ikeda, University of Tokyo, Japan

Hisatoshi Ikeda is currently Project Professor, having been Visiting Professor at Kyushu Institute of Technology for three years previously. From 2002 to 2007 he was General Manager, Transmission and Distribution Research and Development Center at TM T&D Co, and Assistant General Manager at Hamakawasaki-works, Toshiba Corp. Professor Ikeda holds 56 Japanese patents and 12 USA patents. He has been a secretary of the short-circuit testing liaison in Japan.

Users Review**From reader reviews:****Joyce Cassady:**

The event that you get from Power System Transient Analysis: Theory and Practice using Simulation Programs (ATP-EMTP) may be the more deep you rooting the information that hide inside words the more you get serious about reading it. It doesn't mean that this book is hard to comprehend but Power System Transient Analysis: Theory and Practice using Simulation Programs (ATP-EMTP) giving you joy feeling of reading. The article writer conveys their point in a number of way that can be understood through anyone who read it because the author of this reserve is well-known enough. This book also makes your current vocabulary increase well. That makes it easy to understand then can go with you, both in printed or e-book style are available. We advise you for having this specific Power System Transient Analysis: Theory and Practice using Simulation Programs (ATP-EMTP) instantly.

Stephen Stovall:

Often the book Power System Transient Analysis: Theory and Practice using Simulation Programs (ATP-EMTP) will bring you to definitely the new experience of reading any book. The author style to clarify the idea is very unique. When you try to find new book to see, this book very ideal to you. The book Power System Transient Analysis: Theory and Practice using Simulation Programs (ATP-EMTP) is much recommended to you you just read. You can also get the e-book from official web site, so you can quicker to read the book.

Melvin Smith:

You can find this Power System Transient Analysis: Theory and Practice using Simulation Programs (ATP-EMTP) by check out the bookstore or Mall. Simply viewing or reviewing it could to be your solve problem if you get difficulties on your knowledge. Kinds of this reserve are various. Not only simply by written or printed and also can you enjoy this book simply by e-book. In the modern era just like now, you just looking from your mobile phone and searching what their problem. Right now, choose your own ways to get more

information about your guide. It is most important to arrange yourself to make your knowledge are still upgrade. Let's try to choose right ways for you.

Jason Young:

Reading a guide make you to get more knowledge from this. You can take knowledge and information originating from a book. Book is created or printed or created from each source which filled update of news. In this particular modern era like today, many ways to get information are available for anyone. From media social including newspaper, magazines, science book, encyclopedia, reference book, story and comic. You can add your knowledge by that book. Are you ready to spend your spare time to spread out your book? Or just looking for the Power System Transient Analysis: Theory and Practice using Simulation Programs (ATP-EMTP) when you required it?
