By Muhannad Al-Waily

Analytical and Numerical Buckling and Vibration Investigation of Isotropic and Orthotropic Hyper Composite Materials Structures By Muhannad Al-Waily

The analytical solution of the general equation of bucking behaviors and general equation of motion (to evaluated the natural frequency of plate) of isotropic and orthotropic composite plate is investigation. The composite materials studied are isotropic and orthotropic hyper composite materials plate combined from three materials as reinforcement powder, mat or short reinforcement fiber (for isotropic plate) and unidirectional or woven reinforcement fiber (for orthotropic plate) and resin materials. The method using to evaluating the buckling load and natural frequency of orthotropic and isotropic hyper composite plate are theoretical analysis method with derivation the general equation of buckling and general equation of motion of orthotropic hyper composite, and general equation of buckling and general equation of motion of isotropic hyper composite plate. In addition to, drive the equation of properties of hyper composite materials of plate with effect of powder reinforcement and unidirectional, woven, mat or short fiber and resin materials. The results evaluated are the buckling load and the natural frequency of isotropic and orthotropic hyper composite simply supported plate with different aspect ratio of plate ( ), various volume fraction of reinforcement powder and fiber, and different reinforcement and resin materials types. The theoretical results evaluated of buckling and natural frequency of plate comparison with numerical results evaluated with finite element method by using Ansys program ver. 14, where, the compare between the theoretical and numerical results shown a good agreement with maximum error about (2.7%) with buckling results of isotropic materials plate and maximum error about (1.9%) with buckling results of orthotropic materials plate and maximum error about (3.2%) with natural frequency of orthotropic materials plate and maximum error about (1.8%) with natural frequency of isotropic materials plate. The results evaluated are the buckling load and the natural frequency of simply supported orthotropic and isotropic hyper composite plate combined from powder reinforcement and unidirectional, woven, mat or short fiber and resin materials with different volume fraction and materials types of resin and reinforcement,

and different dimensions of plate. The results shown that the adding of reinforcement powder causes increasing of modulus of elasticity of hyper composite plate, and then, the increasing the volume fraction of reinforcement powder causes increase the natural frequency of isotropic and orthotropic hyper composite plate structure. And, the results shown that the buckling load of plate increasing with increase of the reinforcement powder and the buckling load non effect with the powder reinforcements types. Also, the results shown that the buckling load increases with increase the mat, short, unidirectional or woven reinforcement fiber more than the increases of the buckling load of composite plate with increase of powder reinforcement. And, the buckling load increasing with increase the modulus of elasticity of resin materials types used. Also, the effect of powder reinforcement on the natural frequency of unidirectional and woven hyper composite material beam was studied. The study of natural frequency was evaluated with three methods, the first is theoretical method with driving of the general equation of beam motion with shear deformation and rotary inertia effects, the second is driving of the general equation of motion for single degree of freedom beam, and the third is the numerical method with finite element method by using Ansys program Ver. 14. The study included the powder reinforcement volume fraction effect for hyper composite material beams of the following types: unidirectional, woven hyper composite beams with different volume fractions of fiber.

Editorial Review

About the Author
Dr. Muhannad Al-Waily, Lecturer at Mechanical Engineering Department, Faculty of Engineering , Al-Kufa University. Ph.D. In Mechanical Engineering/College of Engineering/Alnahrain University/Iraq. Specialization: Applied Mechanics- Vibration Analysis, Composite Material, Crack Analysis, Health Monitoring, Graduation Date: 2012. M.Sc. In Mechanical Engineering/ College of Engineering/University of Kufa/Iraq. Specialization: Applied Mechanics- Vibration Analysis, Composite Material, Stress Analysis, Graduation Date: 2005. B.Sc. In Mechanical Engineering/ College of Engineering/University of Kufa /Iraq. Specialization: General Mechanics, Graduation Date: 2002. Research Interests, Vibration Analysis, Stress Analysis under Static and Dynamic Loading, Composite Materials, Fatigue and Creep Analysis of Engineering Materials, Mechanical Properties of Engineering Materials, Control and Stability of Mechanical Application, Damage (Crack and Delamination Analysis) and other mechanical researches. E-Mail: muhanedl.alwaeli@uokufa.edu.iq; muhannad_al_waily@yahoo.com Phone: +9647811185334, +9647719888550

Users Review

From reader reviews:

Diane Adams:

Now a day people who Living in the era everywhere everything reachable by talk with the internet and the resources within it can be true or not involve people to be aware of each data they get. How many people to be smart in acquiring any information nowadays? Of course the solution is reading a book. Studying a book can help men and women out of this uncertainty Information particularly this Analytical and Numerical Buckling and Vibration Investigation of Isotropic and Orthotropic Hyper Composite Materials Structures book because book offers you rich details and knowledge. Of course the data in this book hundred pct guarantees there is no doubt in it you know.

Jasmine Myers:

This Analytical and Numerical Buckling and Vibration Investigation of Isotropic and Orthotropic Hyper Composite Materials Structures tend to be reliable for you who want to become a successful person, why. The explanation of this Analytical and Numerical Buckling and Vibration Investigation of Isotropic and Orthotropic Hyper Composite Materials Structures can be one of several great books you must have is definitely giving you more than just simple studying food but feed anyone with information that probably will shock your preceding knowledge. This book is definitely handy, you can bring it just about everywhere and whenever your conditions throughout the e-book and printed types. Beside that this Analytical and Numerical Buckling and Vibration Investigation of Isotropic and Orthotropic Hyper Composite Materials Structures giving you an enormous of experience like rich vocabulary, giving you trial run of critical thinking that we realize it useful in your day activity. So , let's have it and luxuriate in reading.

Steve Pratt:

The book with title Analytical and Numerical Buckling and Vibration Investigation of Isotropic and Orthotropic Hyper Composite Materials Structures has a lot of information that you can find out it. You can get a lot of gain after read this book. This specific book exist new know-how the information that exist in this guide represented the condition of the world currently. That is important to yo7u to understand how the improvement of the world. This specific book will bring you throughout new era of the globalization. You can read the e-book on the smart phone, so you can read this anywhere you want.

Jack Lumpkin:

What is your hobby? Have you heard that will question when you got scholars? We believe that that concern was given by teacher with their students. Many kinds of hobby, Every individual has different hobby. So you know that little person including reading or as looking at become their hobby. You have to know that reading is very important in addition to book as to be the point. Book is important thing to provide you knowledge, except your own teacher or lecturer. You get good news or update regarding something by book. A substantial number of sorts of books that can you choose to adopt be your object. One of them is Analytical and Numerical Buckling and Vibration Investigation of Isotropic and Orthotropic Hyper Composite Materials Structures.

Read Analytical and Numerical Buckling and Vibration Investigation of Isotropic and Orthotropic Hyper Composite Materials Structures By Muhannad Al-Waily for online ebook

Analytical and Numerical Buckling and Vibration Investigation of Isotropic and Orthotropic Hyper Composite Materials Structures By Muhannad Al-Waily Free PDF d0wnl0ad, audio books, books to read, good books to read, cheap books, good books, online books, books online, book reviews epub, read books online, books to read online, online library, greatbooks to read, PDF best books to read, top books to read Analytical and Numerical Buckling and Vibration Investigation of Isotropic and Orthotropic Hyper Composite Materials Structures By Muhannad Al-Waily books to read online.
